2009 NAI According to Garry Adalian, or Luck of the Draw

Wednesday night at the NAI is always a fun night. It was no different at the beautiful Seattle Yacht Club in September for the 2009 NAI. All the contestants and their wives and crews arrive, and you get to say hello to old friends that you have made over the years.

Cocktails, heavy hors d'oeuvres, and a lot of story-telling for an hour or so starts the evening, leading up to the much anticipated boat drawing. Every contestant has a list in his pocket with the name and type of boats that are available, hoping that he/she might be lucky enough to draw the boat that they think will give them the best advantage for the race. The method of drawing the boats varies from race to race, depending on the inventiveness of the race committee. This time, I was relieved to find that all I had to do was pick a card to determine what sequence in the drawing I was, and then just spin a wheel with numbers on it. Las Vegas style. Much better for me than Pin the Tail on the Donkey or Name that Tune, which is fun for some, but always made me squirm.

My card was a six, and I watched in anticipation, hoping that none of the five before me would spin number eleven, a Grand Banks 32, which was my first choice. Actually, there were quite a few trawler-style boats that would have been suitable, but the Grand Banks was the first choice, since my boat in San Diego is a GB 32. Spinning number eleven was great moment.....for just a moment.

Bob Lindal, our Master of Ceremonies for the evening, then informed me that the GB 32 had to withdraw from the competition, and the replacement boat was a 68-foot, 200,000-pound Nordhaven named *Zorro*. I had heard earlier that there was a big boat in the competition but hadn't heard that it had replaced the GB, so this really floored me. All I could think about was how the hell was I going to get this Queen Mary around the buoys of Bainbridge Island. I could read a bunch of minds in that room that were thinking the same thing. Maybe a few snickers too.

Thursday morning was the boat trials, and, since the owner, Bill Grady, had said the boat was new and had no numbers yet, we left the dock at 0730, fig-

NACA Objectives

The objective of the North American Cruiser Association is to promote the sport of Predicted Log Contests in North America. Pursuant to this objective, NACA will:

1. Publish and distribute a periodic newsletter known as the *Cruiser Log*, which shall contain news and information pertaining to the sport.
2. Schedule and coordinate an annual "North American Invitational" (NAI) Predicted Log Contest.
3. Sanction contests of member associations that are to be scored for NACA points.
4. Maintain and publish scoring and standings of Predicted Log contestants participating in NACA sanctioned contests.
5. Provide perpetual and suitable keeper trophies and other awards for winners of such North American Predicted Log series and events as may be established by NACA.
6. Establish "Recommended Contest Rules" for NACA sanctioned Predicted Log Contests.
7. Generally be responsive to the needs and requirements of member associations and of the sport of Predicted Log Contests.
8. Support boating and Corinthian yachting in general.

Commodore's Corner

I just got back from four days at Bob Bondurant's racing school with a friend. The reason I bring it up is that, as different as the two activities are, there are similarities between car racing and predicted log racing. Speed is not included, of course. But there are similarities.

The quickest way to get through a corner is to follow a racing line, which needs to be predicted in advance of increased speed. The closest way to match an on-the-water prediction of time between marks is to follow a straight line, done by back sighting.

On a race track, one needs to hit the turn-in point, apex, and exit point consistently. In logging, a contestant needs to locate and pass the called marks with the boat in the proper position.

On the race track, one needs the utmost concentration to stay on the racing surface and not run off the road or crash. In logging, a short time of concentration lapse can cause one to go off course, not call a mark, or miss a turn after a timed run.

These similarities of accuracy, concentration, and precision can be honed with practice and experience. Whether driving against others in a car or boating in a predicted log contest, you are ultimately competing against yourself. Preparation, practice, precision, and concentration will help you achieve your goal in either endeavor.

By the time you read this, the 2009 NAI in Seattle will have been completed. I hope all of the contestants will have had a great time and made it home safely.

A Bit of Trophy History

When NACA spun off from the APBA in 1979, our new commodore, Walter Del Mar, asked Martini & Rossi if we might carry the APBA Martini & Rossi Championship Trophy over to NACA. On top of the Martin & Rossi Trophy was a beautiful shell sculpted in sterling silver. They responded by stating that we could retain the base, but they requested that we return the sterling silver shell.

Walter then did a search and located an elegant Waterford crystal globe that now sits atop what is currently known as the Coastal Explorer Predicted Log Championship Trophy. I believe that Walter donated the crystal globe for the trophy.

In the thirty years since NACA assumed it from Martini & Rossi in 1979, it has been sponsored by Gulfstar Yachts, Grand Banks Yachts, Offshore Yachts, and, presently, Rose Point Navigation.

It remains the most prestigious trophy in North American predicted log racing.

2009 Barusch/Castagna Contest

Cruiser navigation competitors from Puget Sound and Gulf of Georgia swept into Southern California on June 25, 26, and 27, 2009 and swept the field in the annual Pacific Coast Yachting Association Barusch/Castagna Trophy predicted log competition. Twelve contestants, representing eleven West Coast regions, tested their skills against the unusual currents and ocean swells off the shores between Newport Beach and Los Angeles. The weather was perfect, with light winds and moderate swells. The lovely host venue, Bahia Corinthian Yacht Club, was friendly, convenient, and helpful. And a great team led by Chairman J.D. Smith demonstrated that "Predicted Log Racing is a Social Event!"

Twelve area captains volunteered their boats for use by competitors, and it was an excellent collection of contest boats. They ranged from a 32' Tiara to a 60' Symbol. The first order of business was, of course, the Thursday evening boat drawing. A modified version of "Name that Tune" required quick wit and hand raising/whistle blowing coordination, which quickly led to chaos and laughter. The result was a truly random selection of boats by the contestants.

Friday provided a typically lovely Southern California day for boat trials. I was fortunate to draw *Billy the Kid*, a 60' Symbol, owned by Bill and Pat Winberg. They were perfect hosts and allowed me and my crew of Trish Anderson, Bob Lindal, and Sue Lindal free reign with the boat.

Knowing that the base speed for the event was nine knots with unlimited throttle adjustments, we established a speed vs. rpm curve. In addition, we established turn radius, time lost in turn, compass correction table, and other tidbits of information important to log racers. We used all of the four hours allotted for the purpose and returned to our digs to plan our run.

The interesting 30.8 nautical mile course took us along the shore, from the entrance buoy for Newport Bay to the Huntington Beach Pier, then off-

shore around a series of three oil platforms. The turns at the platforms were required to be constant radius turns between 200 and 300 yards from the platform centers.

Now that we were well off-shore with no landmarks ahead, the longest leg of the run took us over eight nautical miles to a buoy just over the visible horizon. Then, a short leg to the finish at the entrance buoy. It seemed a straight forward course until currents were introduced. Current data for Southern California waters is scanty at best! Bob and I searched the Web, reviewed old races, and talked with other mariners with experience in the area. We gave it our best shot and turned in my race predictions.

Can you imagine our consternation when, on the course, we find currents on one leg perpendicular to the currents on the next leg? We made our best guesses and had some success. Leg 3, on which we managed two seconds of error, led our score sheet with four other legs under 2% error. But that Leg 5, shortest leg of the course, with the perpendicular currents, 8.5% error. With a final score of 2.0894% error, we were not happy boaters. But, to the rescue came our hosts, the Winbergs. Once comfortably moored at Bahia Corinthian YC, we were plied with attitude adjusting beverages, considerably improving our state of mind.

The results, of course, were a carefully guarded secret until the awards banquet. An excellent dinner

2009 NAI According to Carl Johnson

After a long airplane trip from Boston, navigator Chuck Rubin and I settled in at the Marriott Residence Inn on the southern shore of beautiful Lake Union, Washington. On Wednesday evening, we learned that we were going to be paired with Linda and Fred Cole aboard their 45-foot vessel, *Mouse Trap*. Diane Benson and Jeff Swan were to be observer and scrutinizer.

Thursday morning dawned somewhat cloudy, but the waters of Lake Washington proved calm and apparently free of current. The measured mile lay alongside the Route 520 bridge and was easy to b-cate and run. We were able to check for compass deviation, since the course was roughly east to west. With numbers in hand, we completed prediction calculations. Although the Coles usually run *Mouse Trap* at 2100 rpm, we wanted to run at 8.5 knots, so 1700 rpm was selected to give a flat water speed of 8.43 knots. Three runs made at 1700 rpm were very repeatable, so we were comfortable with the decision.

The bridge on *Mouse Trap* is very large and accommodated crew, charts, and instruments without crowding. In anticipation of the contest, all current calculations were completed ahead of time. The contestant data provided (to be used for current calculations), although helpful, proved confusing at times, especially through Rich Passage.

On Saturday the 26th, the weather was perfect. We walked the length of Elliot Bay Marina to turn in our paperwork and waited to see where we would be slotted at the start. As it happened, the 68-foot leviathan *Zorro* was starting about three minutes behind us. We had visions of her huge bow looming over *Mouse Trap*'s transom on every turn during the second half of the contest. So, all aboard agreed that we should start about two and a half minutes early to give extra breathing room.

Then, off we went. The course is a piece of cake as long as your compass is right on, you keep the stopwatch handy for the timed runs, and you have a

good eye for distance off. In Rich Passage, a state ferry passed at a distance and posed no difficulty. Navigator Rubin had a chance to observe the buoys in this area for current strength, and it appeared to be what we predicted, except for the leg starting at the end of the 0.4 nautical mile timed run to Point White light, where the current disappeared. We increased rpm to compensate, but it was too late. After passing Pt. White light, we just barely crossed in front of a tug towing a small barge. Of course, at times like this everyone has a thought – will we make it – should we take a time out? But, we were okay.

Cruising up Port Orchard was nice and peaceful, and delicious sandwiches came out. We even found the end of Fletcher Bay Road. We passed through Agate Passage. Again, the current was less than expected. At this point, we were wondering how well we were doing with respect to distance off the mark. Our pelorus gave an approximation, but it is not very accurate. Navigator Chuck Rubin felt we were pretty good. Making the turn off Point Jefferson, *Mouse Trap* tangled a bit with competing vessel *Freedom*. However, all seemed to sort out without difficulty. The turn at the range (Agate Point and Monroe Point) was relatively straightforward. Some boats seemed to miss this, though.

Approaching Meadow Point raised the specter of entering an ongoing sailboat race. As we entered the field of sailboats, it became apparent that, be-

The Soggy Log (or *Mrs. Malloy Goes North*) - Part III (Final)

High Adventures on the Inside Passage

Jack & Marcia Hicks Spend Five Months aboard the *Mrs. Malloy*, Grand Banks 32, Hull #1
May 1 through September 31, 1997

Food

The provisioning of the larder was well-planned by the first mate. The use of ice and ice chests limited the amount of meat and time we could store it. We quickly fell in to the pattern of having to add ice every third day and re-supplying every five or six days. We could stretch out with canned goods an additional day or so.

A secret weapon turned out to be my grandmother's Dutch oven. A versatile pot. We fried bacon and eggs, made pot roast, short ribs and sauerkraut, wonderful lamb shanks, chicken and dumplings. It's great for popcorn. We ran four burners and the oven on propane. Ten pounds of propane lasted about twenty-six days. The oven saw a lot of traffic in muffins, cakes, pies, cobblers, cornbread, baked potatoes, baked yams, stuffed acorn squash, quiches, and sneakers. The galley is better equipped than the kitchen at home.

Canadians cut their meat differently, so this affects the taste somewhat. Chicken is pretty much chicken, but beef is a challenge, and pork is an enigma. Don't know what they feed their pigs, but chops, roast, and bacon all had a decidedly different flavor. We decided we didn't like it.

In hitting port, we had a routine. Dump the garbage, get ice, fill the water tanks, do laundry. Then head for the thrift shop, book exchange, bakery, and market. Buy meat on day one and ask the butcher to freeze it; we would pick it up when we did our main grocery shopping the next day.

At Lagoon Cove, we got a tip on how to preserve bread. Take the whole, un-sliced loaf and lightly brush on a thin coat of plain white vinegar. Wrap in paper, and it will keep several weeks. Works for

cheese also.

The menu was varied, and the weak spot was the aperitifs at sundown. The Canadians tax spirits very heavily to pay for their medical system. So, even bargain barrel quality wine was dear. Most Canadians brew their own with quality results. What the boat needs is a good wine cellar. I figure it might just fit between the bowling alley and the pool table.

The pubs overall have pretty good food. Moby's at Ganges had the best fish and chips. The rule we learned the hard way twice is that if you enter a restaurant and there are no patrons, leave. Quick.

The most overpriced meal was tea at the Empress. The surprise best luncheon was the Sidney Tea House, where we escaped out of the rain. The bakery in Poulsbo had the best blueberry pie, but Ganges was very close. We had the very worst Chinese dinner ever at Powell River. Remember, if you are the only customers, don't be.

Epilogue

What we learned:

1. Preparation pays off. We were never in doubt about the boat's ability to handle any sea condition.
2. There was more stress than we thought. The rainy spring flooded the waters with logs, deadheads, docks, pilings, barrels, tubs, and trash. Anything that could float and get in your way, did. We spent far more energy keeping watch in reduced visibility than was expected. And the thing you hit, you didn't see.
3. Radio reception was generally poor. After putting in a SSB, I couldn't get Vancouver/Victoria radio but kept up to date on the soccer

(Continued on page 7)

The Soggy Log—Part III (Final)
(Continued from page 6)

- scores in Britain, courtesy of BBC.
4. With the drought years over, obtaining water and ice was not a problem. Getting rid of garbage was the challenge. You pay to get rid of it. The kayakers go ashore to burn what will burn and deep six the rest.
 5. Holding tanks are not common. The fact that 90% of e-coli and other bacterium are destroyed by osmotic pressure when exposed to salt water within one hour is not completely reassuring. You keep thinking of that other 10%...
 6. The larger the boat, the smaller the dog. For example, the 140' Feadship at Ganges on Salt Spring Island. The first mate carried off her yippy-skippy dog in her purse. The 26' Bayliner had two 85-pound Huskies. Live ballast and warmth at night is what we guess.

I also came to understand the prayer, "O God, your ocean is so vast and my boat is so small." As we moved further north, the sense of really being alone sank in. It adds another dimension of stress when you are out of range for any immediate response to an emergency call.

The vision of the final scene plays out with a small oil slick where we went down. What would float to the top as a final marker? With my luck, it would be the world's worst detective story that we got at a book exchange, where, after savoring each word and following a twisted and arcane plot, can you believe it, the "butler did it".

The epitaph would read: "Middling sailors, lacked taste."

NACA News

During the 2009 NAI awards dinner on Saturday night, September 26, 2009, the following new slate of NACA officers for 2010 was installed:

Commodore: Bob Lindal
Vice Commodore: Craig Ryan
Rear Commodore: Jeff Calabrese
Secretary/Treasurer: John Vignocchi
Jr. Staff Commodore: Robert VanLandingham, Jr.

NACA Directors-at-Large:

Bill Winberg - Southern California Cruiser Assn.
Marty Muir - San Diego Cruiser Association
Duke Wheeler - St. Petersburg Yacht Club
Neil McClelland - IPBA/Gulf of Georgia

NACA Staff Commodore Al Smith presented the prestigious Lou Gandelman Perpetual Trophy, which is awarded to a member who has made a significant contribution over time to the development of the sport of predicted log racing. It was deservedly awarded to Bob Lindal of IPBA/North.

The winner of the 2009 NAI was Garry Adalian of San Diego Cruiser Association, with a score of 0.0721%.

The tentative dates of future NAI's were announced as:

08/07/10 SCCA at Shoreline YC, Long Beach, CA
10/15/11 St. Petersburg YC, St. Petersburg, FL
08/04/12 Chicago YC, Chicago, IL

Additionally, it should be noted that Rose Point Navigation Systems generously donated three copies of the popular Coastal Explorer Program, which were raffled and auctioned off at various functions over the entire course of the event.

All in all, a very good time was had by all who attended the gala event, hosted by Seattle Yacht Club.

Tom Collins
Southern California Cruiser Association

Luck of the Draw
(Continued from page 1)

uring this was going to be a long morning. *Zorro* had a beautiful bridge with all the bells and whistles. However, both Bob Ehlers, my helmsman, and I felt we needed the visibility of the flybridge. The flybridge had all the bells and whistles too, except for one. A wheel. There was just this little joy stick that was part of the auto pilot. Bob said to give it a go, so we headed for the measured mile on the south side of the bridge on Lake Washington.

One thing became apparent right away. Whereas the joy stick was fine for making turns, it was not good for steering the boat. Once you make a turn, you have to put it on the auto pilot.....fast. But then something else became apparent. Once you put it on auto pilot, the boat was rock solid, holding the heading to a degree.

Then we discovered the rpm varied all the way from 1459 to 1460. This was going to be one hell of a platform to run a race on if we could just get some good speeds and turns. Bill told us that the boat seemed to like 1460 rpm, and, after just a few runs, that gave us a speed of 8.64 knots. All that was left was the turns.

This was a shocker. My GB 32 takes 28 seconds to do a 180 degree turn. *Zorro* took 62. When I did my spread sheet, I had a total of four minutes and four seconds of turns on the race alone. All I could think was if we have as much time in errors on the race as we do in the turns, we're dead meat.

After a fairly restless night (thinking of turns), Saturday morning showed calm, with only some high clouds. Arriving Elliot Bay Marina, Puget Sound showed smooth water, and I couldn't help thinking that if conditions stay like this for the next five hours, we could have a real fighting chance for a good race.

Puget Sound can be a real bear with the currents (up to seven knots through Agate Pass) and inclement weather conditions. I feel it gives the local racers a real advantage, especially against us Southern Cali-

fornians, where we call a current of one knot rip-snorting. Today, with the strongest currents forecast to be .8 knots around Pt. White and only .4 through Agate Pass (it was actually 1.2 knots), coupled with the benign weather conditions that the day promised to be, we now had a level playing field. It could be anyone's race.

We started right on our predicted start time with no conflict with other boats. Decatur Reef buoy was the first check point and the first point where we could get an idea of the currents. However, at 200 yards abeam and only .2 knots predicted, we got no indication. By the time we got to the 'R' buoys, we started seeing current as we had predicted.

It was here that some fast-moving ferry boat started honking at us, suggesting that we get the hell out of his way. Going past R6 showed a lot more current, but, by the time we got to R8, there was nothing. We had predicted from .5 to .8 from R6 to White Pier, and, going by Pt. White Light, CP 2, there was still nothing, and I realized we had busted that leg.

We pushed it up the full 10% all the way to White's Pier, but it still wasn't enough. Approaching Agate Pass, we had predicted a push due to the current changing to an ebb, but it was still weak. It was hard to read the buoys while we were approaching Agate Bridge. It wasn't until we got to R2 that we realized the current was a lot stronger.

But R2 was only a route point, so we had all the way to Jefferson Pier to correct, **if** we could find

(Continued on page 9)

FUTURE NAI EVENTS
(Tentative)

- 2010 Long Beach, California
- 2011 St. Petersburg, Florida
- 2012 Chicago, Illinois

Luck of the Draw (Continued from page 8)

something to correct on. A crab pot with its line hanging straight down gave us a good tip, and we left the throttles alone. The biggest challenge of the race (besides guessing 750 yards off of Indianola Pier) was going to be correctly calling the range from Pt. Monroe to Agate Point. Miss that one, and your ninety degree turn to the Blind Point by Meadow Pt. would be a real bust.

In the skippers' meeting two days before, they had shown photos of the line-up for the two points, which was a real help. Except for that honking ferry boat on the back side of Bainbridge Island, there was no conflict with other boats until we were approaching the final stretch.

There was a large sailboat race at Meadow Pt. buoy, where a lot of us were starting to get close together for the 1500 finish thirty minutes later. Luckily, the winds were light, so it made it easier to dodge all the sailboats that were milling about with their index fingers in the air. We finished at 1500:07, just seven seconds off our predicted finish time, but in the middle of a lot of other boats finishing at the same time.

Figuring our score, we came in with a .7207% corrected, which normally would have put a sly smile on anyone's face. However, with all the other boats finishing within seconds of us, I began to wonder if we had even finished in the money.

At the peel-off before dinner, it looked like my fears might be founded. Bob Lindal started the peel-off by announcing the top five net errors. Our seven second net was only fifth. A good net error doesn't mean you are going to have a good race, but without a good net error, you definitely are **not** going to have a good race. Halfway through the peel-off, there were two .4's, some .6's and .7's, with only two racers just over 1.0%; my apprehension kicked up a notch.

We had to look at those scores all through dinner until Bob continued the peel-off for the last four

legs. Legs 4, 5 and 6 showed it was still a horse race, and the winner wouldn't be apparent until they peeled off Leg 7.

Bob then announced he would call the winning boats starting with third place. When he called a score of .96%, we knew we were in the money. Money, hell, we were second or first! Then, in a blur, he called second with a "point 7..... (long, long pause)...9", and, with a small coronary, we knew the big boat had won.

The hospitality of Seattle Yacht Club was suburb, as was the race committee and support people. Great conditions and light currents, coupled with the big boat that was just as solid as Gibraltar is what gave us the opportunity to finally win the NAI. One more good thing about running a big boat like *Zorro*. Nobody, but nobody, cut us off.

Garry Adalian
San Diego Cruiser Association

Nautical Terms

Aloof

From the old Dutch word loef, meaning windward. It was adopted by English sailors in the sixteenth and seventeenth centuries. In books of old voyages, it is written variously as aluffe, a-luff, and aloof.

It describes a vessel which is sailing along a lee shore with her head pointing into the wind to prevent her being set inshore.

It is also said of a vessel, amongst a fleet of ships, which sails higher into the wind, so that she draws apart. Thus, it has come to mean "one who stands apart".

Son of a Gun

A complimentary term for a sailor, suggesting he
(Continued on page 10)

2009 Barusch/Castagna Contest (Continued from page 4)

prepared by the yacht club staff was followed by a leg by leg peel-off of results. Race master and contestant Craig Ryan acted as master of ceremonies and kept us all in suspense until the very end. For my team and me, it became almost painfully apparent that we performed much better than we initially expected. The pins and needles upon which we were sitting forced Bob Lindal to his feet! I was not far behind.

As it was revealed that Bob Gautschi (Gulf of Georgia) was in fourth place, Mike Henry (Puget Sound South), in third place, and Fred Cole (Puget Sound South), in second place, Bob and I invented a new dance! We led the pack from the Pacific Northwest to a clean sweep, bringing both the individual Barusch Trophy and the Castagna Team Trophy back to Puget Sound yacht clubs. Joe Castagna, sponsor and presenter of the Castagna Team Trophy, remarked that he was sending the team trophy back to Puget Sound, where it appeared to reside permanently. It was a truly memorable event, and I look forward to defending the Cup next year.

Bill Anderson
International Power Boat Association

Nautical Terms (Continued from page 9)

was a natural, born to the job, or, more precisely, born on the job.

It comes from the time when women shared the gun deck accommodation with men aboard ships in port and sometimes at sea. Since the working spaces and gangways had to be kept clear, the only undisturbed place a woman could give birth to a child would be behind screens between the guns.

The expression also meant being conceived alongside a gun, since a hammock wasn't convenient for that sort of thing.

2009 NAI According to Carl Johnson (Continued from page 5)

cause of lack of wind, they were not moving very much. Picking our way through them thus was not a problem, and we did not have to suffer the usual indignity of their various complaints, verbal or otherwise.

Four Mile Rock is a pretty sight, but keeping it five hundred yards to port is hard to do. On the final leg, we were ahead of the pack, as we had expected with an early start. *Mouse Trap* crossed the finish line within one second of 1500 (accounting for our early start). Knowing that being close at the finish is nice (i.e., might win a bottle of wine in some contests), it's no guarantee that the rest of the contest is as good. And as the peel-off revealed, there were plenty of seconds of error in between. After three legs, *Mouse Trap* stood tenth in a field of eleven. Oops! The committee let us stew over this during dinner. And stew we did.

While basking in the glow of a couple of glasses of wine, the final four legs were peeled and revealed that *Mouse Trap* had clawed her way up to third place, a very respectable finish.

Many thanks to the IPBA/N committee and crew for a superior NAI, one that will always be remembered for its excellent organization and weather.

Carl Johnson
New England Cruiser Association

Editor's Note—The complete results of the 2009 NAI are now posted on the NACA website:

Kidde Recall

The U.S. Consumer Product Safety Commission, in cooperation with the firm named below, announced a voluntary recall of the following consumer product. Consumers should stop using recalled products immediately unless otherwise instructed.

Name of product: Kidde XL Fire Extinguishers
Units: About 167,000

Distributor: Walter Kidde Portable Equipment, Inc., of Mebane, N.C.

Hazard: The pressurized cylinders in the recalled fire extinguishers could lose pressure and fail to operate. In the event of a fire, this failure could put a consumer and property at risk.

Incidents/Injuries: None reported.

Description: This recall involves the Kidde XL Fire Extinguishers with model numbers FX340SC, FX340H, FX340GW, XL5MR, FX210R, FX340SC-s, FX210W, XL2.5TCZ-4, E-340-3 and with manufacture dates between October 2007 and April 2008. "Kidde" and the model number can be

found on the label on the front of the extinguisher. The manufacture year is on the bottom of the extinguisher. If your extinguisher is one of the listed model numbers and is marked with the year 07 or 08, contact Kidde to determine if you have a recalled extinguisher.

Sold at: Department, home, and hardware stores nationwide from October 2007 through April 20-08 for about \$35.

Manufactured: in Mexico.

Remedy: Consumers should immediately inspect the pressure gauge. If it points to the red zone, contact Kidde to receive a free replacement extinguisher. If the gauge is not in the red zone, but you have questions about an extinguisher within the listed model numbers, please contact Kidde for additional information.

Consumer Contact: For additional information, contact Kidde at 888.345.4407 between 8 a.m. and 5 p.m. ET, Monday through Friday, or visit the firm's web site at www.kidde.com.

Encourage a friend to join the North American Cruiser Association... *Today!*

Membership in NACA keeps everyone who is interested in Predicted Log Contests well informed about the sport throughout North America. Competitors from thirteen member Associations compete for National Trophies simply by competing in their local contests. The champion from each organization competes in the North American Invitational, hosted by a different organization each year.

Your dues entitle you to receive *Cruiser Log* (the NACA newsletter), the Annual Yearbook that lists all NACA members and their addresses, along with information about the member organizations, and the NACA Handbook that details the national rules for Predicted Log Contests as well as the perpetual trophies.

To join the North American Cruiser Association or renew your membership, complete this membership form and mail it with your check to:

Bob Ehlers, Acting Executive Secretary

Get Serious!

With the only navigation software that includes features designed specifically for Predicted Log Racers

Navigation Software Just Got a Lot Better!

Use Coastal Explorer to help plan your next Predicted Log Race. Our exclusive curved waypoint transition creates more accurate routes and Estimated Time of Arrival because the intended route is depicted and calculated for each route leg as a curve rather than a straight line. Set a port and starboard turning radius for your vessel and Coastal Explorer will do the rest! Copy a planned route directly into MS Excel for further manipulation and fine tuning. These features combined with Coastal Explorer's easy to use, uncluttered user interface make it the ideal choice for your next race and all your cruising needs.

Visit www.rosepointnav.com for more information and a free trial. Or call 425-605-0985
